## **DETAILED ACTION**

### ***Title of the Invention***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### ***Abstract***

2. The abstract of the disclosure is objected to because the abstract is too short. It should be within the range of 50 to 150 words. Correction is required. See MPEP § 608.01(b).

### ***Specification***

3. The disclosure is objected to because of the following informalities: the "Brief of the Summery of the Invention" are missing. Please see an example of "Content of Specification" below.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (c) BRIEF SUMMARY OF THE INVENTION.
- (d) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (e) DETAILED DESCRIPTION OF THE INVENTION.

Furthermore, in page 3, para [16], line 9, "A alab-on-chip@" is incorrect.

Appropriate correction is required.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim1 is rejected under 35 U.S.C. 102(b) as being anticipated by Nakajima et al. (US 5,270,572).

Nakajima shows a structure of a device comprising (see Fig. 1) a body comprising a primary surface adapted for attachment to a substrate die, for example an element 2 and at least partially defining a fluid chamber 10; a fill port fluidically 6 connected to the fluid chamber; and evacuate port fluidically 3 connected to the fluid chambers.

4. The references of interest are cited:

Silverbrook (US 6,299,300 B1) shows a structure of an MEMS device. Love et al. (US 5,514,906), Galyon et al. (US 5,016,090), Umezawa et al. (US 5,023,695), and Ashiwake et al. (US 5,705,850) shows a structure of a device including a cooling device.
